Everyone has a heart: 
Take Care of Yours & Live Your Best Life!

Why is Cardiovascular Genetic Screening Important?

- More than 1 in every 200 people have an inherited heart disease.
- Inherited heart diseases are the leading causes of sudden death in young people.
- Inherited gene abnormality does not automatically result in heart disease. Knowing your risk can help you understand and manage your health.

Read Benefits and Learn the Risks (flip over)
The average cost of genetic testing is $250

The average out-of-pocket cost is $100
